

Ideation Phase Brainstorm & Idea Prioritization

Date	
Team ID	NM2025TMID05911
Project Name	Laptop Request Catalog Item.
Maximum Marks	4 Marks

Laptop Request Catalog Item:

The current laptop request process in the organization is manual, time-consuming, and lacks standardization, leading to frequent delays, incomplete information, and administrative inefficiencies. Employees have no guided interface to submit accurate requests, and the absence of dynamic form behavior causes redundant data entry and errors. Additionally, the process lacks proper tracking and governance, making it difficult to manage approvals and monitor changes. To overcome these challenges, the project aims to develop an automated Service Catalog item in ServiceNow that streamlines laptop requests through dynamic forms, user-friendly guidance, reset functionality, and complete change tracking for efficient governance and deployment.

Step-1: Team Gathering, Collaboration and Select the Problem Statement:

Step-2: Brainstorm, Idea Listing and Grouping:

Fig: Image that describes the work done by teammates.

- **Brainstorm:** Team members freely share and explore potential solutions without judgment, fostering **creativity** and **full participation**.
- **Idea Listing:** All suggestions generated during the session are meticulously **documented** to capture every input and ensure nothing is missed.
- **Grouping:** Similar ideas are clustered into **logical categories** to reveal common themes, establish **priorities**, and simplify the final selection process.
- **Action Planning:** The selected ideas are transformed into **concrete, actionable steps**, complete with **assigned responsibilities** and **defined timelines** for implementation.

Step-3: Idea Prioritization:

Idea Prioritization:

Idea prioritization helps structure the project into focused, actionable components. In this project, the main objective is to automate and simplify the laptop request process through the Service Catalog in ServiceNow. This ensures faster approvals, accurate data collection, and reduced manual errors. By prioritizing ideas, the workflow can be divided into clear stages—form design, dynamic behavior implementation, validation, and governance tracking. This approach highlights the importance of user experience, operational efficiency, and transparency. Each step, from request submission to deployment, becomes more organized and measurable. Visual tools like mockups and process maps further enhance understanding. Overall, idea prioritization sharpens the project's direction and ensures smooth, efficient execution.
