Customer Problem Statement Template:

Employees currently face challenges when requesting laptops for work due to a manual, time-consuming process. The lack of a standardized digital system leads to delays, incomplete information, and frequent communication gaps between employees and the IT team. Without dynamic form behavior, users often make input errors or miss essential details, resulting in rework and slower approvals. They need an automated, user-friendly Service Catalog solution that simplifies laptop requests, provides guided inputs, and allows form resetting when needed. Additionally, proper change tracking is required to maintain governance and transparency. This solution will enhance request accuracy, speed up approvals, and improve overall employee experience and operational efficiency.

Laptop Request Automation: Problem & Solution

Problem	Description	Solution
Manual Process	Current requests are paper-based/ email, lacking standardized.	Automated Service Catalog item with guided forms
Incomplete Data	Frequent missing specifications, cost codes, or manager approvals.	Dynamic forms with mandatory fields and conditional logic
No Tracking/Visibility	Difficult to know with request status, status, bottlenecks or history.	Integrated workflow for real-time status, notifications and audit trails
Approval Delays	Manual routing leads to forgotten approvals or history.	Automated approval workflows based user's department/manager
Approval Delays	Manual routing leads or incorrect approvers	Automated approval workflows based user's department/manager
Error Prone	Manual data entry causes mistakes mistakes in equipment equipment or user details	Pre-populated user data and rules to minimize errors
Reporting & Governance	Lack of data makes it hard to analyze trends or ensure compliance	Dashboard with metrics on request cycle time, and costs

Example:

Problem Statement (PS)

PS No.	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	an Employee	request a laptop for work	the current process is slow and manual	there's no digital form or guided workflow	delayed and uncertain
PS-2	an IT Administrator	process multiple laptop requests efficiently	requests often come with missing or incorrect details	there's no validation or dynamic form behavior	frustrated and overburdened

■ ✓ ■ Problem Statement PS 1:

As an employee, I am trying to request a laptop for my work, but the current manual process is slow and confusing because there is no digital form or clear guidance. This makes me feel uncertain and frustrated as my request often gets delayed or lost. I need an easy-to-use online system that guides me through the request and ensures my submission is complete and accurate.

■ ✓ ■ Problem Statement PS 2:

As an IT administrator, I want to efficiently review and approve laptop requests, but I often receive incomplete or incorrect submissions because the process lacks validation and automation. This causes delays in approval and additional back-and-forth communication. A dynamic Service Catalog form with built-in checks and reset functionality would streamline the process, reduce errors, and save time for both employees and administrators.
