

Project Design Phase
Proposed Solution

Date	
Team ID	NM2025TMID05911
Project Name	Laptop Request Catalog Item
Maximum Marks	2 Marks

Proposed Solution Template:

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	The current laptop request process is manual and inconsistent, leading to delays, incomplete submissions, and communication gaps between employees and IT administrators.
2.	Idea / Solution Description	Develop an automated Laptop Request Service Catalog in ServiceNow with dynamic fields, guided inputs, form reset options, and validation checks to ensure accuracy and efficiency.
3.	Novelty / Uniqueness	Introduces intelligent form behavior and user-friendly automation within the ServiceNow platform, eliminating manual intervention while maintaining governance and traceability.
4.	Social Impact / Customer Satisfaction	Improves employee satisfaction through faster approvals, error-free submissions, and clear instructions, while reducing workload for IT teams and ensuring smoother operations.
5.	Business Model (Revenue Model)	Though not directly revenue-generating, the solution enhances productivity, minimizes downtime, and lowers operational costs by streamlining asset management workflows.
6.	Scalability of the Solution	The system can be extended to manage other IT assets (monitors, peripherals, software requests) and integrated with approval workflows or asset tracking modules for larger deployments.

Conclusion

The "Automated Laptop Request Process" significantly enhance employee experience and operational efficiency.

Key Outcomes:

- User-friendly interface
- Realtime tracking and transparency
- Improved data accuracy and compliance
- Faster, more efficient provisioning

Accuracy

Efficiency

Governance

Solution Description:

To automate and streamline the laptop request process in ServiceNow, a customized Service Catalog item is created for employees to easily submit laptop requests. The form includes dynamic fields, guided instructions, and validation checks that adjust based on user input to ensure accurate and complete submissions. A reset option is also provided for convenience, allowing users to start over if needed. All configurations and updates are tracked through update sets to maintain governance and deployment control. This solution eliminates manual errors, speeds up approval workflows, and enhances the overall efficiency and transparency of IT asset management.
